Recommendations

It would be beneficial for Botium Toys to focus on least privilege, better password policies and proper password management system to ensure the security of the accounts and to reduce the chance of insider threats and compromised account issues. Cleaning up and modernizing legacy systems, strengthening backups, and updating disaster recovery plans would help the company stay steady even when things go sideways.

Adding layers of firewalls,AV, IDS, IPS and solid physical controls like CCTV, locks and fire detection systems would secure the overall everyday security.

Separation of duties would reduce risk and overall impact of malicious insider or compromised accounts.

On the compliance side, improving data classification, better privacy procedures and building a secure internal environment to store clients data such as credit card details to

ensure it aligns with PCI DSS, GDPR and SOC expectations would be a better option to maintain the safety and trust of customers and the business alike.
